

The below mockups are for the magic mirror server web page for users. As discussed the below mockups will all contain the primary aspects of the web page as follows:

#### Wifi

- Connect (reiterated so users won't feel they lost the connect button on the home screen)
- Forget networks

#### Password

- Change password (this will also be a prompt, as discussed, right after users first view the home page but is reiterated if users don't automatically follow the prompt)
- Forgot password

#### Device

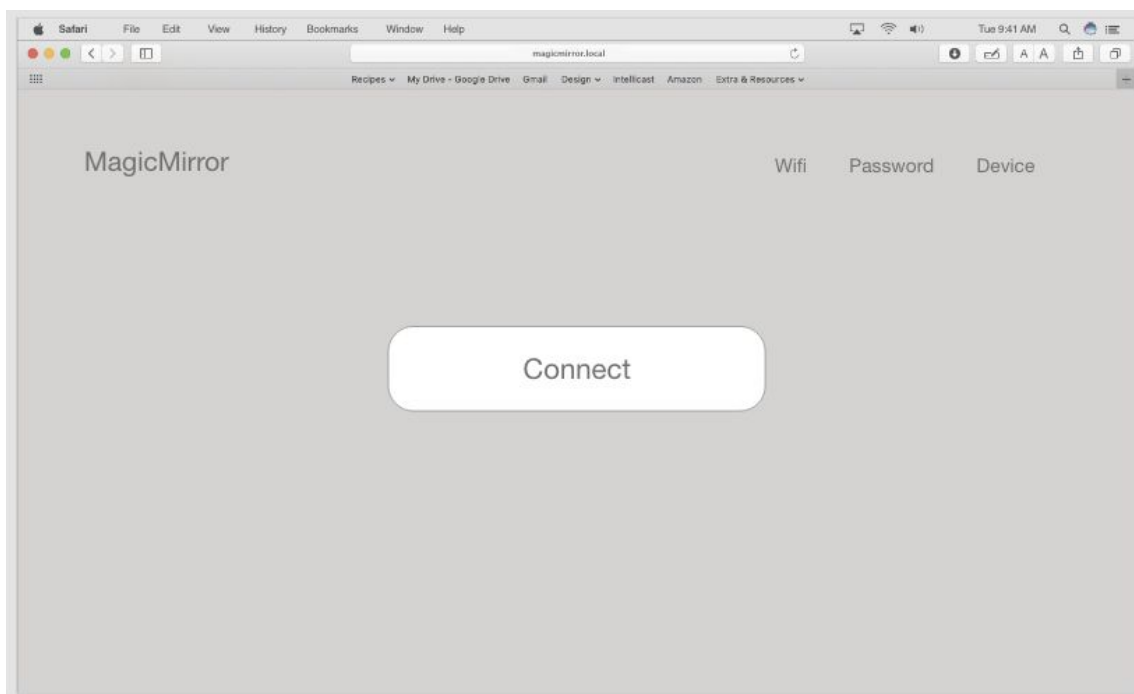

- Update
- Reboot Device
- Reset Device

For clarification the Update section as seen above is not included within the mockups but will be added in the next state of prototypes.

#### Mockup 1:

This first mockup allows for a simplistic design with the main call to action being the connect button in the middle. The simple navigation at the top right allows for users to be able to easily jump from page to page based on need.

The navigation is thought to be a hover selection so users can easily see what is in each subtopic.

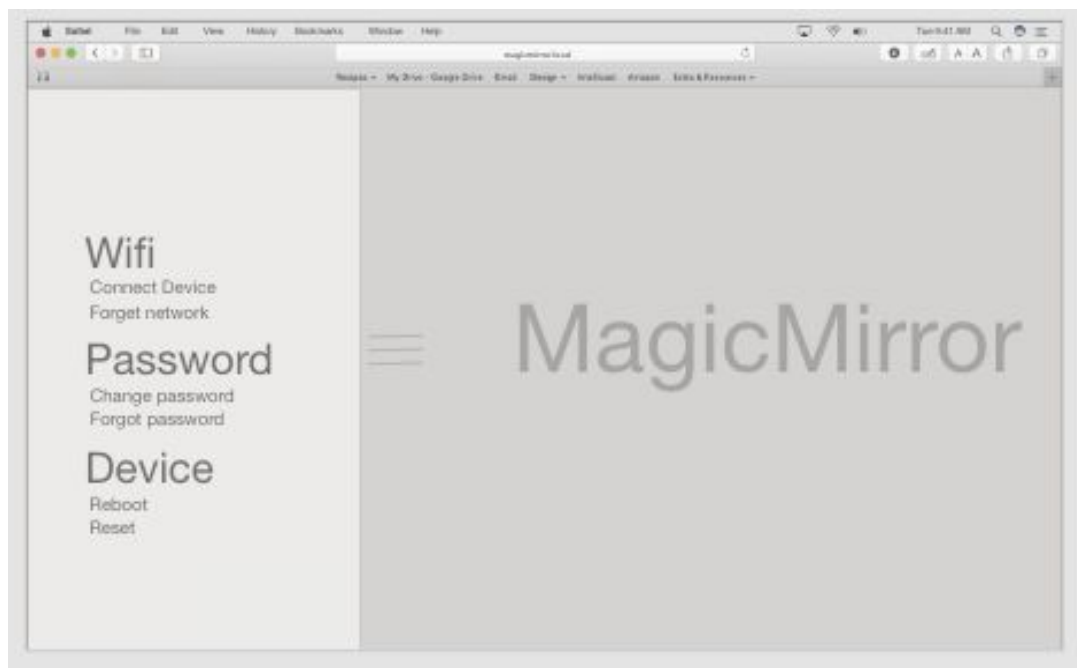

## Mockup 2:

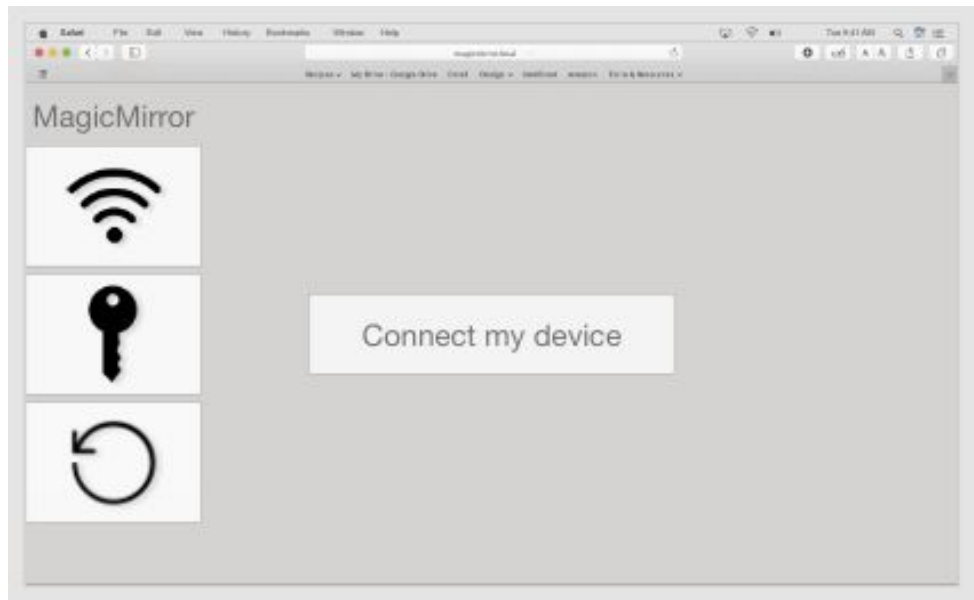

Mockup two is a little more fancy yet maintains the desired simplistic usage.

Users would encounter this as the home page and would use the left side navigation (which appears to be somewhat faint for this prototype but would be made darker) to explore deeper into each subtopic.

The left side menu expands to show the main navigation and upon hover, the subcategories under each main would appear.

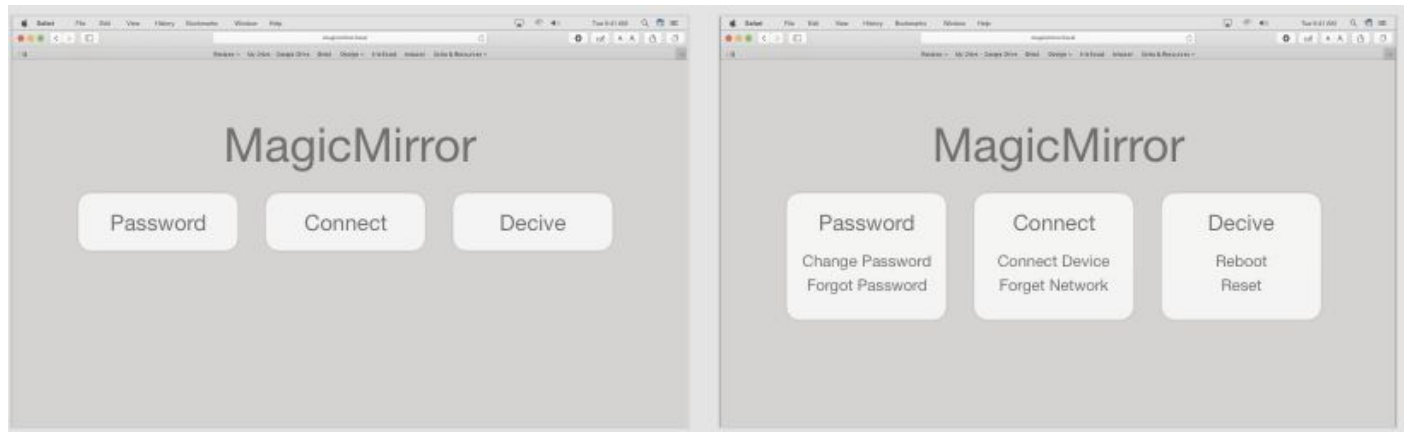

Mockup 3:

Mockup three allows for large icons for users to interpret easily. This mockup shows the main call to action for users. Upon hover or click the selected category expands allowing for navigation to desired category.

### Mockup 4:

Mockup four contains large buttons within the main area of the webpage. These could easily be converted to icons or icons added with text as well.

Upon hovering, the subcategories are displayed for users to easily navigate to desired destination.

## Mockup 5:

For this mockup, I wanted to entertain the idea of progression sequence for the home page. The progression would follow as seen below with the MagicMirror name presented large and progressing to a smaller logo at the top of the page with the welcome message underneath.

Then, it would end with the logo, welcome message, navigation, and large call to action button.

This design maintains the simplistic usage for the users and also adds some minimalistic progression to enhance the user's initial experience.
